

Responsible Investment Policy

Arago Capital perceives that, through its direct and indirect investments, a significant impact is generated on society and the environment in the short and long term, in consequence aims to establish a responsible investment policy for the whole investment platform.

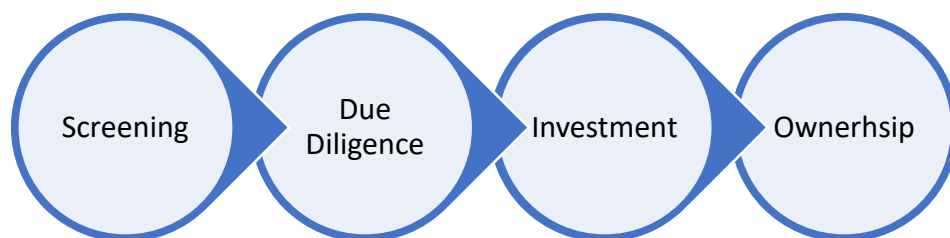

To complement and achieve a greater impact, since 2020, Arago Capital participates as a signatory of the Principles for Responsible Investments (PRI), a leading international organization that promotes sustainable investment through the incorporation of environmental, social and governance aspects in the process's investment.

The company's approach incorporates the highest international ESG standards that are based on:

- Sustainable Development Goals (SDG) of the United Nations Organization
- IFC Performance Standards on Environmental and Social Sustainability
- Principles of Responsible Investment (PRI)

In the ESG analysis process, a clear methodology is incorporated which examines the practices and actions of the companies and fund managers, in order to provide information on risks, with the final objective of providing recommendations and action plans.

ESG Methodology

Arago considers that transparency in ESG matters is a responsibility. Arago strives to keep key ESG aspects of its investment portfolio and internal operation. The applicability of this policy will be managed by the areas involved and supervision will have the support of the ESG Committee, including the Compliance Officer.
